Office Action Summary

Art Unit: 3683

1. Receipt is acknowledged of the amendment filed on 2/01/2002.
2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
3. The specification is objected to under 37 CFR 1.71 because there is no description of a dampening means or method.
4. Claims 12-22 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Note the above discussion in paragraph 3.
5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

6. Claims 12-22 are rejected under 35 U.S.C. 102(e) as being anticipated by Feigel.

Note counterforce (counter current weighting). The brake pedal position and force determines the vehicle deceleration.

7. Applicant's arguments filed 2/01/2002 have been fully considered but they are not persuasive. Contrary to applicant's contention, the description that the pedal components "may" include a damping effect or "may be" performed by varying the hydraulic effective cross-section is not an enabling disclosure of reducing a damping effect.

Regarding Feigel, the countercurrent weighting is a counterforce that is reduced as broadly recited. As to one of brake pedal travel, speed and acceleration, as claimed only one of these criteria need to be shown in the reference and Feigel shows pedal travel.

8. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
